PROPHET RMS

REMOTE MONITORING SERVICE

BRING REVOLUTIONARY CHANGE TO THE WELLSITE

ProphetRMS Web pages allow real-time viewing of rig activity and provide notification for rigs that are not performing as expected.

Efficiency reporting based on historical results allows performance evaluation and comparison between rigs or groups of rigs. Contractors can be measured according to performance against standards or against each other.

Oil and gas producers can reduce the cost of wellsite interventions by up to a dramatic 30% per well with ProphetRMS from Advanced Measurements Inc. Prophet technology brings the intelligent equipment revolution to service rigs and substantially improves job efficiency, job quality and job safety!

ProphetRMS delivers results

Using rig-to-Internet technology combined with sophisticated data analysis and reporting, ProphetRMS (Remote Monitoring Service) keeps stakeholders plugged in to conditions and activities in the field. The system provides pinpoint accuracy on rig and rig-crew efficiency, and vital job quality measurements. Producers and contractors alike get powerful, accurate and detailed operational information produced in real time and made available to any stakeholder with Internet access.

The annual cost of unmeasured performance can easily exceed \$400,000 – per service rig. Multiply that savings across a fleet of rigs, and that’s a lot of money!

How it works

ProphetRMS brings revolutionary new techniques for acquiring, analyzing and reporting on rig operations. Prophet-enhanced service rigs automatically monitor and collect data from the wellsite using sensors incorporated throughout the rig for specific operational parameters and rig-operator activities. This intelligent service-rig system puts decision-quality information at the fingertips of field operators, as well as in the hands of all stakeholders.

ProphetRMS delivers this information and more. The system is not subjective, but based on real data and sophisticated analysis to deliver the results you need to keep wellsite operations safe, productive and profitable.

PROPHET RMS

Advanced Measurements, Inc. is working over the well service industry with its forward-thinking technology. It's called Prophet, and it brings decision-quality information to both rig operators and producers. Prophet is a unique blend of industrial control and up-to-the-minute data gathering on field operations. And the immediate benefits are job safety, quality and efficiency. This combination results in a higher return on field assets at a lower cost of wellsite intervention.

We support I-Rig certification. www.i-rig.com
