REMOTE MONITORING SERVICE

*Turning data into
decision quality
information*

- Sensor verifiable data results in decision quality information
- Optimize your well servicing operations
- Improve efficiency, quality, safety & wellsite management
- Transparent operations and superior communication for all stakeholders
- Objective performance measurement, and comparison to industry norms
- Provides a substantial return on investment and reduces lifting costs

**INCREASING
EFFICIENCY,
SAFETY,
and QUALITY with
IMPROVED ASSET
and WELL
MANAGEMENT**

Decision quality information positively impacts safety, increases efficiency, improves quality and simplifies overall management of field assets and resources.

The result: significant return on investment to clients across a variety of energy sectors.

ProphetRMS delivers results

Using rig-to-Internet technology combined with sophisticated data analysis and reporting, **ProphetRMS** (Remote Monitoring Service) keeps stakeholders plugged in to conditions and activities in the field.

Key ProphetRMS features include:

- Robust, oilfield proven hardware
- Easy operation with minimal user intervention required
- Wireless doghouse data viewing
- Safety, operational warnings and alarms for crew
- Quality functionality significantly enhances job quality
- Secure web-based access to operational data for all stakeholders
- Quantified performance measurement
- Indication of operational anomalies, per job and trended over time
- Historical archived record of operations

How it works

ProphetRMS brings revolutionary new techniques for acquiring, analyzing and reporting on rig operations. **ProphetRMS**-enhanced service rigs automatically monitor and collect data from the wellsite using sensors incorporated throughout the rig for specific operational parameters and rig-operator activities. This intelligent service-rig system puts decision-quality information at the fingertips of field operators, as well as in the hands of all stakeholders.

ProphetRMS delivers actual information based on real data, rather than subjective opinions. Sophisticated data analysis delivers the results you need to keep wellsite operations safe, productive and profitable.

ProphetRMS Web pages allow near real-time viewing of rig activity and provide notification for rigs that are not performing as expected.

Efficiency reporting based on historical results allows performance evaluation and comparison between rigs or groups of rigs. Contractors can be measured according to performance against standards or against each other.

MEASUREMENTS

PROPHET RMS

Advanced Measurements, Inc. is working over the energy industry with its forward-thinking technology. It's called **ProphetRMS**, and it brings decision-quality information to both rig operators and producers. **ProphetRMS** is a unique blend of data collection and up-to-the-minute information sharing on field operations. The immediate benefits are job safety, quality and efficiency. This combination results in a higher return on field assets at a lower cost of wellsite intervention.
